Our draft response

The Wilcox Oil Refinery Site listing on the Superfund National Priorities List of hazardous waste sites was announced in December 2013 and the remedial investigation and feasibility study is being conducted. Information about the site are available on the EPA website at <https://cumulis.epa.gov/supercpad/cursites/csitinfo.cfm?id=0604942> . We also make site information, community presentations and records available at the Bristow Public Library. Our last public meeting was held at the Bristow Public Library in July 2016 and a copy of the presentation is online at <https://semspub.epa.gov/work/06/500022915.pdf>. Our next community meeting to discuss the remedial investigation is being planned soon and will be held at the Bristow Public Library.

**Subject:** needed response

There have been numerous assessments, investigations, samples taken, testing, reports since 1994 by DEQ and EPA with evidence of hazardous substances at Bristow's superfund site – Wilcox Oil Refinery Site.

Neighbors who live on the site say EPA has told them they don't have anything to worry about and that EPA has not warned them about what's on their properties. They say EPA has not suggested that they move off the property.

They did receive a letter in the mail in 2015 from the EPA that shows test results. They want to know why they weren't warned sooner or told about the hazards early-on - like

in 1994 when DEQ did its first assessment and then EPA's subsequent Site Assessments in 1997 & 1999 or the numerous reports put out by both agencies since then.

Will you please let me know how you want to respond?

Thank you.

Janna Clark
